

Social & Environmental Risk Identification

Duration:
2 Days

IMPACT
AMPLIFIED
WORKSHOP

1

Workshop 1:
Phase 1 & 2

2

Six months applying learning
within your business

3

Workshop 2:
Phase 3

You will cover:

- What sustainability, UN SDGs, social value and planetary boundaries means to risk management
- How to integrate social and environmental risk considerations into tools and methodologies
- The evolution of CSR, ESG, Sustainability & disclosures and how that impacts Risk Management
- How to recognise environmental and social risks
- The benefits of Design Thinking techniques and how to apply them
- How balancing people, planet and profits can achieve competitive advantage through risk reduction and value creation.
- Setting actions to apply your learning in your business and measuring the impact
- Where to find the best resources and networks to continue learning and collaborating

Before the workshop

Getting to know you call:

We carefully curate workshop participants to ensure we have the optimum mix of people, from different industries, with aligned learning objectives and collaboration aspirations. To enable this curation process we will have a 20 minute "alignment call".

E-LEARNING

The Essentials :

UN Sustainable Development Goals
Operating within Planetary Boundaries
What is Social Value? What is Impact?

Optional

The Workshop:

UNDERSTAND

Phase One:

1

Meet the Cohort

Meet the latest members of your network from different industries and backgrounds. Your shared learning objectives enable collaboration to start immediately and continue beyond the workshop.

The Essentials

Building on the e-learning modules we delve deeper into the world of sustainability - balancing people, planet and prosperity. We will also look at present and future disclosure requirements.

Meet the Founder

The foundation of our workshops (and why we're different!) is using a real impact start-up to apply theory. The founder will pitch their business - Dragons' Den style.

You will then delve into the environmental and social aspects of their business deepening your knowledge of SDGs, social value and what it means to marry profit and purpose.

EXPLORE & APPLY

1

Phase Two:

Impact Risk

Explore what is meant by impact risk, its evolution and the opportunity to use it as a tool to redress the balance between people, planet and profit. Find out what your peers are doing within their organisations.

Establishing Context

Theorise how risk management should be considered against the backdrop of planetary and social boundaries - explore tools and methodologies.

- Hear from experts and the founder about what they need.
- This is where we learn to use design thinking methods - a process for creative problem solving.

Identification

You have theorised, it is now time to make your collective ideas tangible. Working with the founder you will test and refine those ideas by conducting an identification exercise.

Action Setting

Armed with the theory and some tested ideas, we will agree a set of actions to implement during the 6 month gap between workshops & share where to find the best resources to further your learning.

ACT

2

Tangible Action - six months supported implementation of learning.

When you return to your business to put learning into practice you will be supported by the Impact Amplified team and your workshop colleagues via forums & follow-ups. We become each other's accountability partners.

Phase Three:

MEASURE

3

Revisit & Measure

After 6 months of working to implement the actions set in workshop 2, we reconvene to discuss and share our experiences and measure our impact. We also share outputs from other workshop cohorts - this can be where spinoff collaborations are born!
